

Azure Devops

Jayanth R

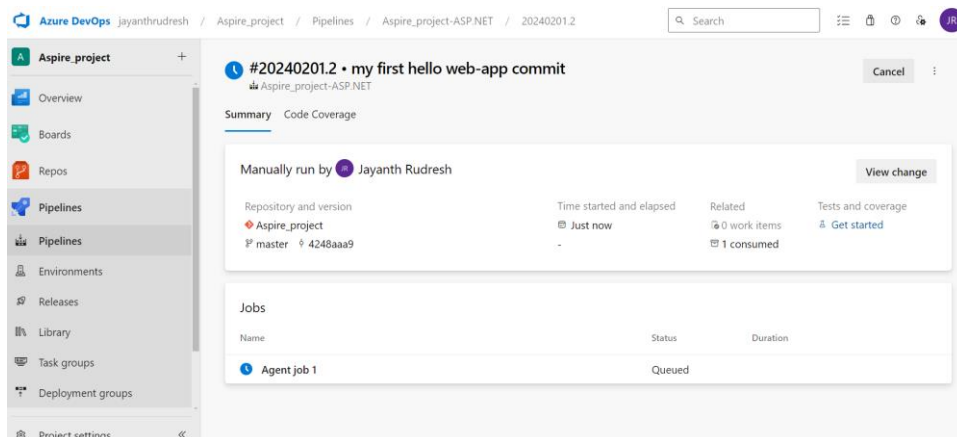

ACE11696

Here are the steps for Azure Devops CI CD.

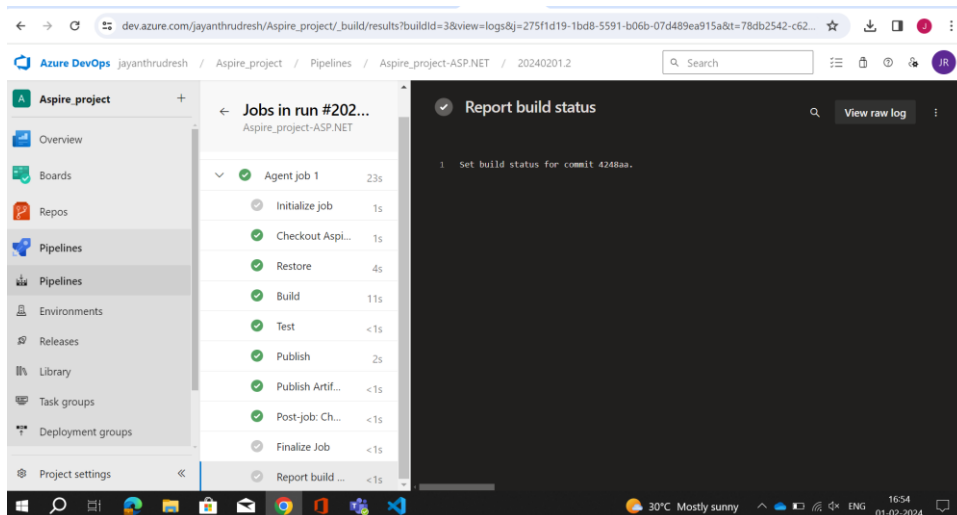

Step 1: Im creating a project in azure devops as “Aspire_project”

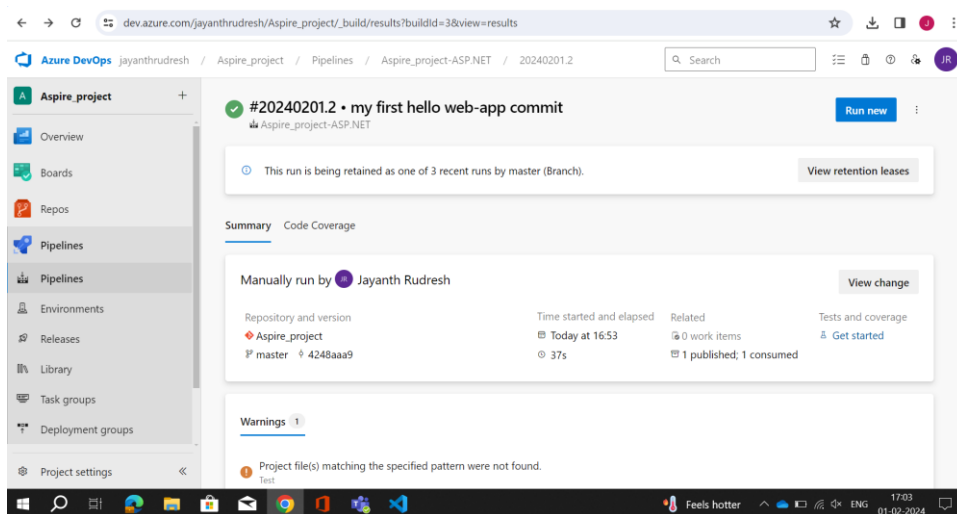

Step 2: This is the pipeline that i have created for build and test i have used custom pipeline and its in run state.

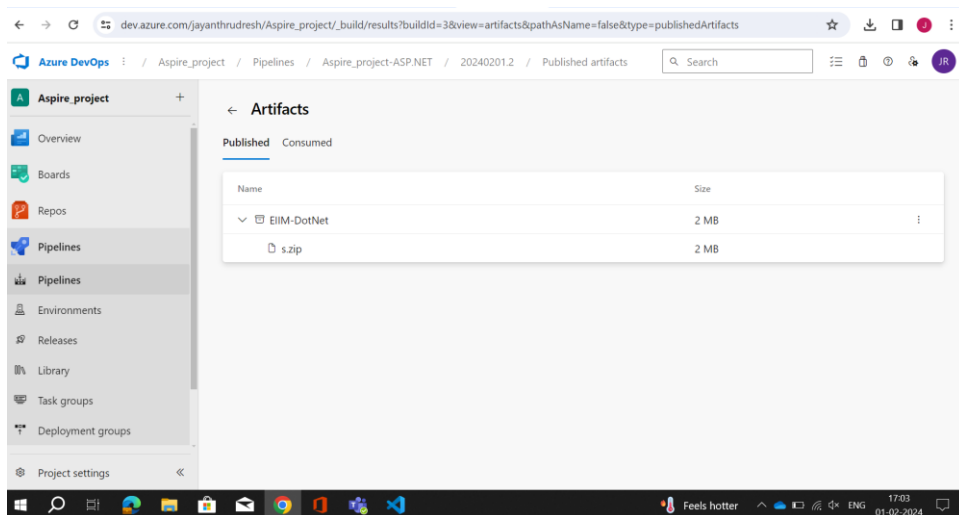

Step 3: This is the logs seen after the completion of the pipeline.

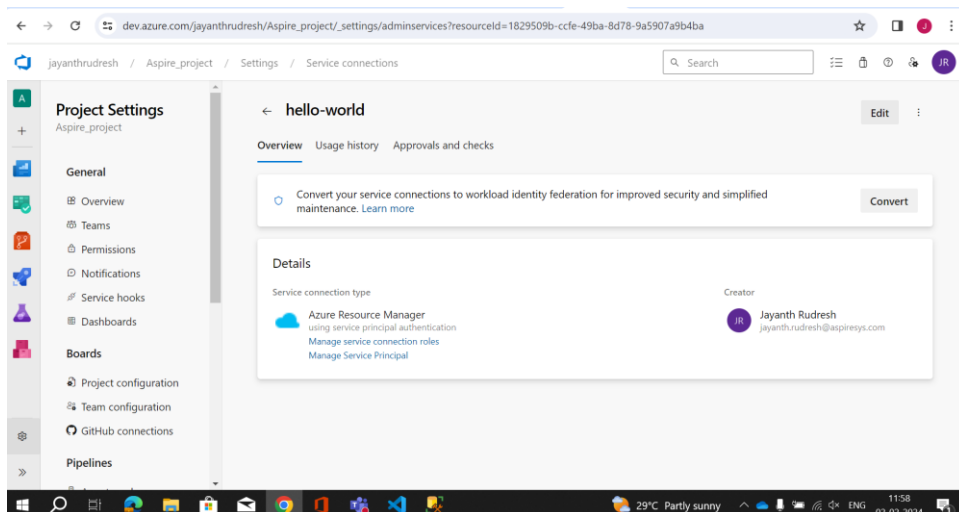

Step 4: This is the result of my pipeline that is success.

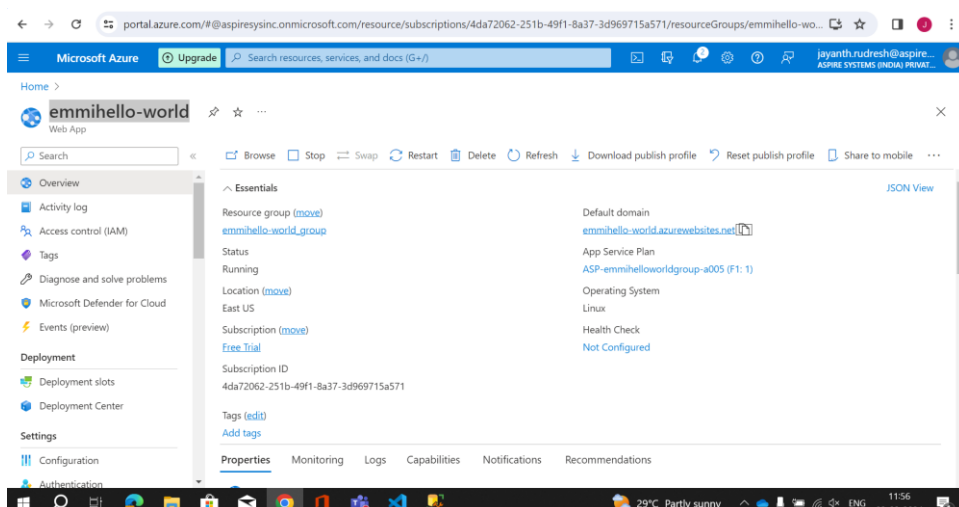

Step 5: This is the artifact that is stored after the pipeline is successful.

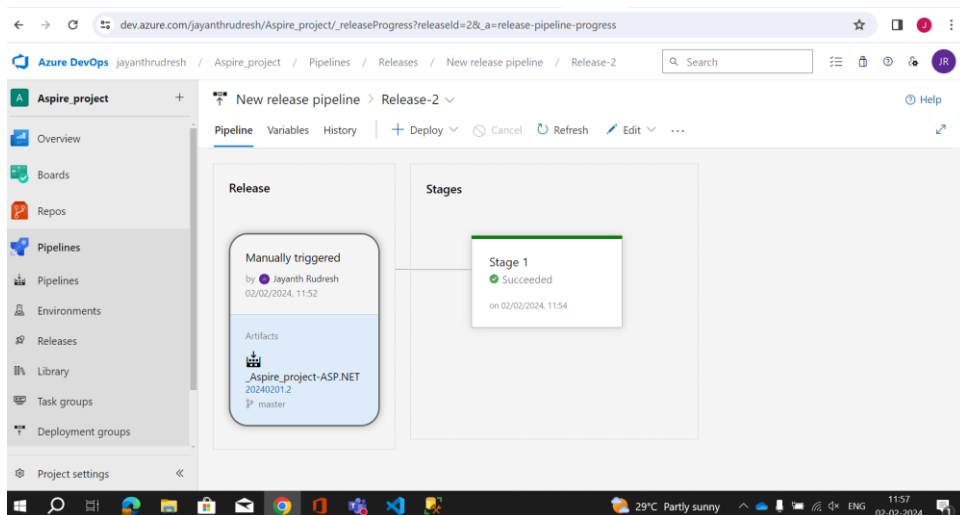

Step 6: Now we must integrate the azure devops and azure web service that is done in project settings in service connection.

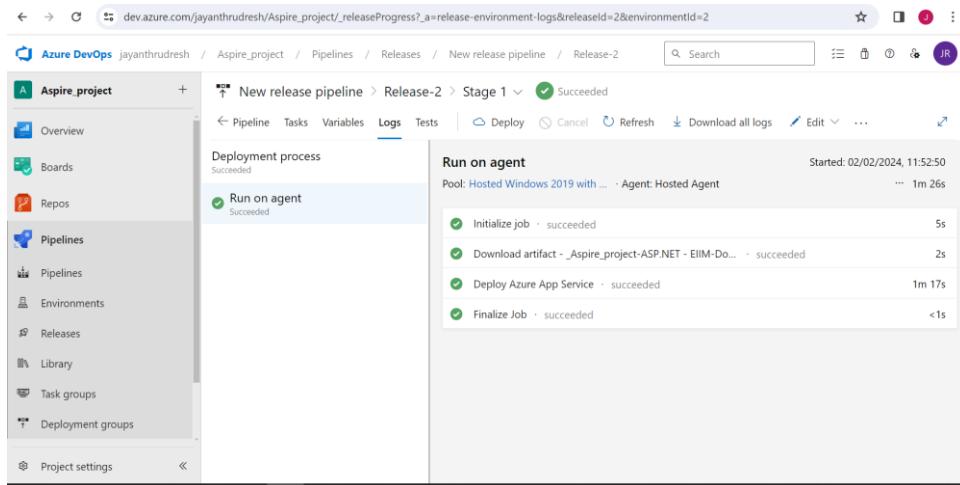

Step 7: This is the azure web app service that i have created to deploy my web app.

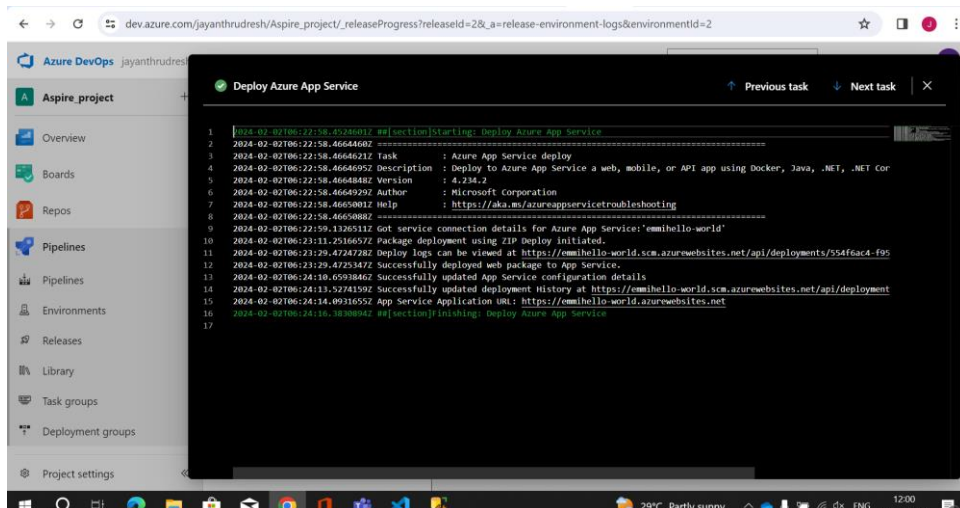

Step 8: This is the release pipeline that i have created and queued.

Step 9: This is the release pipeline which is successful and deployed the web app.

Step 10: This is the logs of my release pipeline where we will get the link for deployed web app.

Step 11: After clicking or navigating to that link we can see our web app deployed.
